

SAMEER SHREENIVAS MITTIMANI

Product Manager | Data & Market Analytics | Financial Services

Chennai, India – Open to relocate | +91 94488 00299 | samsm@outlook.in | linkedin.com/in/sameersm | github.com/cercit

SUMMARY

Twelve years at Sundaram Finance across auto finance, working capital lending, and national market analytics. Currently own the enquiry lifecycle for retail auto across the branch network and turn Vahan vehicle-registration data into the OEM market-share reads that senior management acts on. Launched Bulk Diesel Finance, a lending product that opened a new customer segment in Karnataka and beat budget every quarter. Completing Product Management with Applied AI at iHUB DivyaSampark, IIT Roorkee. Looking for a product role where operational depth in financial services counts.

SKILLS

Product Lifecycle Management, Go-to-Market Strategy, 0-to-1 Product Launch, Product Discovery, Requirements Gathering, User Stories, Roadmap Prioritisation, Agile, Scrum, Sprint Planning, Stakeholder Management, Cross-Functional Collaboration, KPI Definition & Tracking, Market & Competitive Analysis, Customer Segmentation, User Research & Field Discovery, Process Automation, Channel Partner Enablement, Risk & Regulatory Compliance

TOOLS

Power BI, Advanced Excel (Power Query, pivot modelling), SQL, MySQL (DML), Python (AI-assisted), Power Automate Desktop, PowerPoint, Jira, Figma

EXPERIENCE

Sundaram Finance Limited • NBFC • 12 Years

Deputy Manager, Auto — National Retail Team

Apr 2024 – Present | Chennai

Product Brief: Internal data product for retail auto: an OEM market-share intelligence system built on Vahan vehicle-registration data, serving senior management, regional heads, and the national sales team as its primary users.

Product ownership & requirements

- Gathered requirements from corporate leadership and regional heads to define what the market-share platform should surface, how often, and at what granularity
- Read OEM and segment share from Vahan data nationwide, typically catching market shifts before they reached branch-level reporting
- Ideated and supported the build of leading-indicator dashboards in Power BI and Advanced Excel for Associate and Field Officer productivity, replacing monthly reports that only showed lag metrics

Data pipeline & automation

- Designed the end-to-end pipeline: Vahan data scrape → cleaned dataset → automated report generation, cutting report turnaround from days to hours
- Consolidated scattered scripts into standardised workflows now used by other teams. Manual processing time dropped 20–25%

Stakeholder coordination

- Work across corporate leadership, regional sales, and dealer networks to keep national targets and field execution in sync
- Visit branches regularly because the reported numbers and the ground often disagree

Deputy Manager, Working Capital Finance — North Karnataka

Apr 2022 – Mar 2024 | Bellary

Product Brief: Launched Bulk Diesel Finance, a working capital lending product for fleet operators and bulk diesel buyers. First implementation in Karnataka. Supported the scheme design and ran the rollout: segmentation, staff training, channel activation.

Product launch (0-to-1)

- Ran the launch end to end: identified the target segment (fleet owners, diesel buyers), supported scheme structure design, trained branch staff, and onboarded oil company officials as distribution partners
- Turned oil company reps and branch teams into active channel partners. A product only moves if the people selling it understand who it's for

Growth

- Beat budgeted targets every quarter across the full two-year tenure
- Grew B2B disbursement to INR 10–11 crore per month

Field discovery

- Identified the execution gap: staff didn't know who the product was for. Closed it through direct co-selling visits and branch-level training
- Tracked pipeline weekly to catch stalls early and redirect effort before month-end

Branch Accountant (promoted from Cashier, Apr 2017)*Aug 2015 – Mar 2022 | Bijapur*

Product Brief: Branch financial operations: payables, receivables, NPA tracking, loan movement monitoring. Two operational pivots during this tenure: keeping loan origination alive through COVID-19 lockdowns and moving a cash-first borrower base to digital repayment.

Operational problem-solving

- Built a remote KYC and field investigation process over WhatsApp video calls during COVID-19 lockdowns. Kept loan origination running when branch operations shut down entirely
- Moved legacy borrowers from cash to digital repayment. Adoption went from 20% to 60–70% at a point when that shift was still genuinely hard in the region

NPA & portfolio management

- Ran GECL restructurings for idle-vehicle borrowers and recovered NPA accounts through in-branch customer education camps
- Handled repossession, asset sale, and regulatory notice issuance across the branch book

Customer Support Executive*Aug 2014 – Aug 2015 | Shahpur*

- Assessed creditworthiness and ran loan processing from application through disbursement
- Worked with compliance and internal audit. This is where process discipline started looking like a design problem rather than just a rule to follow
